

Beginner's Assignment

Hey Team,

Here's a fun assignment for you all! We're going to build a simple project where you'll take inputs and display them, with a cool animation twist. The idea is to get creative with basic HTML/CSS or React (if you're comfortable) and explore animations. Let's dive into the details:

What You Need to Do:

1. Input Form:

- Create a form with fields for **Name** and **Designation**.
- Enter the details for **four members of the Optica Core Team 2024**.
- After you hit submit, display the names and designations in a list on the same web page.

2. Add Events:

- Below the core team list, add info for **two JSCOP events**.
- Each event should have:
 - **Event Name**
 - **Description**
 - **Photo**
- Add some **animation** to the photos (****thoda explore kisi ko nahi aata toh koi dikkat wali bat nahi hai internet pe docs acche hai thodi docs padhne ki aadat bhi aayegi****)

3. Tech Stack: html,css,react(****agar kisi ko atta hai toh****)

4. Github Repo: <https://github.com/AryanAg08/Github-Session> (is repo me sab apna apna folder push kro)

5. Submit:

- Once done, push your code to GitHub and create a **Pull Request**.

****Guys All the Best yeh mat sochna ki aata nahi hai sab chiz sikhne ke liye hai**

Koi bhi doubt ho grp me daal do aur agar lage ki koi kya sochega dm kar do koi dikkat wali baat nahi hai **
